Panic Case: When just backing up isn't enough

Take the worry out of backup work and ensure business continuity in the event of a disaster

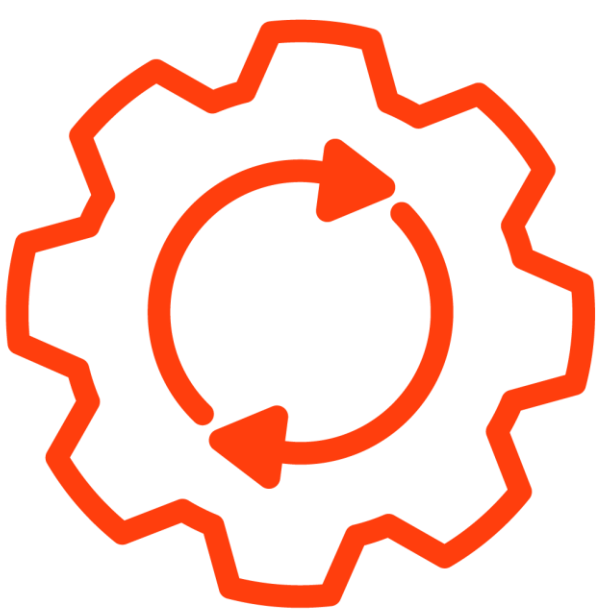

+ Service Model

We offer a service in which we take care of taking the critical objects of your infrastructure to be able to have them in an off-site repository and in less than 4 hours to be able to return them to you in original format to be able to return to a productive environment in a matter of minutes.

Based on a simple, single-console, **24x7 availability** tool based on the leading vendor defined by Gartner.

+ Service benefits

Through an SLA, the **guarantee of delivery of the data is established**, the client defines the type of data to be protected and the production environment, and we do the rest.

The customer receives a periodic report on the status of the data extraction, including access to a real-time portal with the service's SLA.

No commitment to permanence, monthly cost without surprises, no cost per download, price fixed from the beginning of the service.

+ Success stories

We have several success stories, both in industry, public sector, retail, as well as in the health sector, with recoveries of production platforms of less than 48 hours in highly critical production environments after a massive Ransomware attack with encryption of the entire customer environment, we can tell you first-hand from **Estratec360**
